

Project Performance Test

Date	29 June 2026
Team ID	SWTID-2026-8141
Project Name	Visualization Tool for Electric Vehicle Charge and Range Analysis
Maximum Marks	

Model Performance Testing:

S.No	Parameter	Values / Description
1	Data Rendered	Successfully rendered 4 CSV datasets containing Electric Vehicle specifications, charging station information, EV models, pricing, battery capacity, driving range, charging speed, and regional charging infrastructure.
2	Data Preprocessing	Removed duplicate records, handled missing values, standardized column names, corrected inconsistent data formats, created calculated fields, and prepared datasets for Tableau visualization.
3	Utilization of Filters	Interactive filters were implemented for Brand, Region, Charging Station Type, Vehicle Model, and Price Category to enable dynamic exploration of dashboard insights.
4	Calculated Fields Used	Created calculated fields for Average Driving Range, Top 10 Efficient EV Brands, Vehicle Count by Brand, Charging Station Distribution, Price Categories, and Regional Analysis.
5	Dashboard Design	Developed 1 Interactive Tableau Dashboard containing 8 Visualizations including Charging Station Map, Regional Charging Analysis, EV Price Comparison, Vehicle Range Analysis, Brand Comparison, Body Style Analysis, Powertrain Treemap, and Top Efficient EV Brands.
6	Story Design	Developed 1 Tableau Story consisting of 8 Story Points that explain EV charging infrastructure, regional analysis, vehicle pricing, driving range, brand comparison, efficiency analysis, body style distribution, and powertrain insights in a logical sequence.
